

API Shield Lite Security Report

API URL

https://swiggy.com

Security Score

40/100

Risk Level

HIGH

HTTPS Enabled

Present ■

Response Time

1224.08 ms

Explainable AI

-
- • HTTPS communication is enabled, ensuring encrypted API traffic.
-
-
- • Response time was 1224.08 ms indicating acceptable API performance.
-
-
- • Only 0 out of 5 recommended security headers were detected.
-
-
- • Missing X-Frame-Options may expose users to Clickjacking attacks.
-
-
- • Missing Content-Security-Policy increases Cross-Site Scripting risk.
-
-
- • Missing Strict-Transport-Security may allow SSL stripping attacks.
-
-
- • Missing X-Content-Type-Options can enable MIME sniffing attacks.
-
-
- • Missing Referrer-Policy may expose sensitive information through referrer leakage.
-
-

- Overall security score was reduced due to missing defensive controls.
-
- Final Security Score : 40/100
-
- Risk Classification : HIGH
-

AI Security Summary

-
- The scanned API is available and uses HTTPS for encrypted communication.
-
- However, several critical HTTP security headers are not configured.
-
- Only 0 out of 5 recommended security headers were identified.
-
- The missing headers increase exposure to:
-
- Clickjacking
-
- Cross-Site Scripting (XSS)
-
- SSL Stripping
-
- MIME-Type Sniffing
-
- Information Leakage
-
- Overall Assessment:
-
- The API currently has a HIGH security risk profile and requires remediation before being considered production ready.
-

Security Recommendations

-
- HIGH PRIORITY
-
- ■ Enable Strict-Transport-Security (HSTS).
-
-

- MEDIUM PRIORITY
-
-
- ■ Configure Content-Security-Policy (CSP).
-
- ■ Enable X-Frame-Options header.
-
-
- LOW PRIORITY
-
-
- ■ Enable X-Content-Type-Options header.
-
- ■ Configure Referrer-Policy.
-
-

Security Improvement Analysis

-
- Current Security Score : 40/100
-
-
- Potential Security Score : 100/100
-
-
- Possible Security Gain : +60 Points
-
-
- Improvement Percentage : 60%
-
-
- Estimated Risk Reduction : HIGH → LOW
-
-
- Expected Security Maturity : Fair → Excellent
-

Final Recommendation Report

-
- EXECUTIVE SUMMARY
-
-
- Current Risk Level : HIGH
-
-
- Current Security Score : 40/100
-
-
- Security Maturity Level : FAIR
-
-
-
-

- AUDIT CONCLUSION

-
-
- The API supports encrypted communication using HTTPS.
-
-
- However, several browser security protections are absent.
-
-
- These missing controls increase exposure to Clickjacking, XSS and browser-side attacks.
-
-
- Security hardening is recommended before deployment into production environments.
-
-
-
-

- RECOMMENDED ACTION PLAN

-
-
- 1. Configure all missing security headers.
-
-
- 2. Re-run the assessment after remediation.
-
-
- 3. Validate improvements through a follow-up security scan.
-
-
-
-

- FINAL VERDICT

-
-
- The API is functional and publicly accessible.
-
-
- However, additional hardening is recommended before production deployment.
-
